

1) Bước 1: Cấu hình ConnectionString:

```
5  -->
6  <configuration>
7  <configSections>
8    <!-- For more information on Entity Framework configuration, visit http://go.microsoft.com/fwlink/?LinkID=237468 -->
9    <section name='entityFramework' type='System.Data.Entity.Internal.ConfigFile.EntityFrameworkSection, EntityFramework' />
10 </configSections>
11 <connectionStrings>
12   <add name='DefaultConnection' connectionString='server=localhost;database=IdentityExampleDb;uid=demo;pwd=123456789' />
13 </connectionStrings>
14 <appSettings>
15   <add key='webpages:Version' value='3.0.0.0' />
16   <add key='webpages:Enabled' value='false' />
17   <add key='ClientValidationEnabled' value='true' />
18   <add key='UnobtrusiveJavaScriptEnabled' value='true' />

```

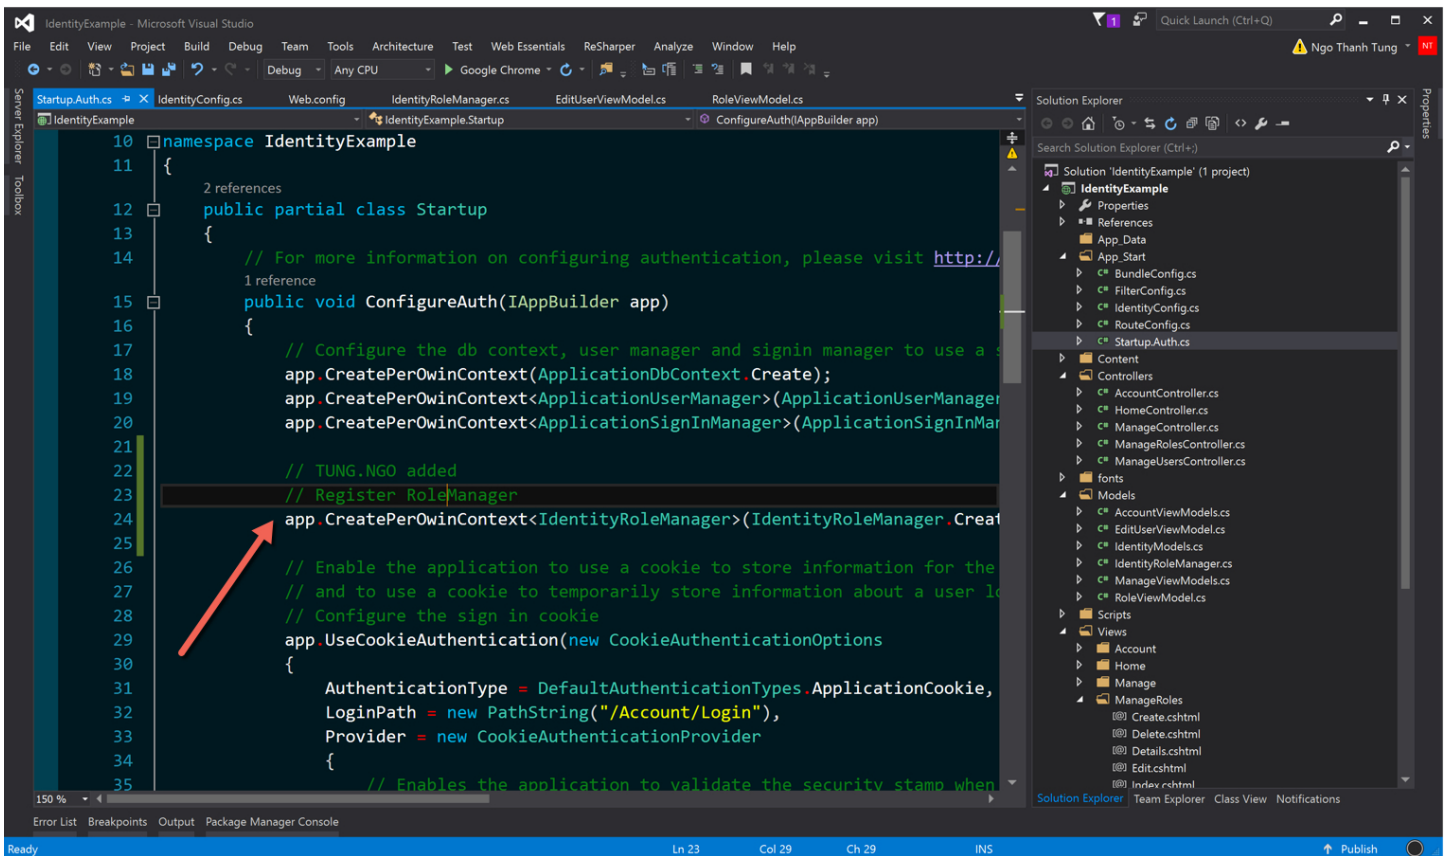

2) Tạo class IdentityRoleManager để quản lý các Role trong Identity:

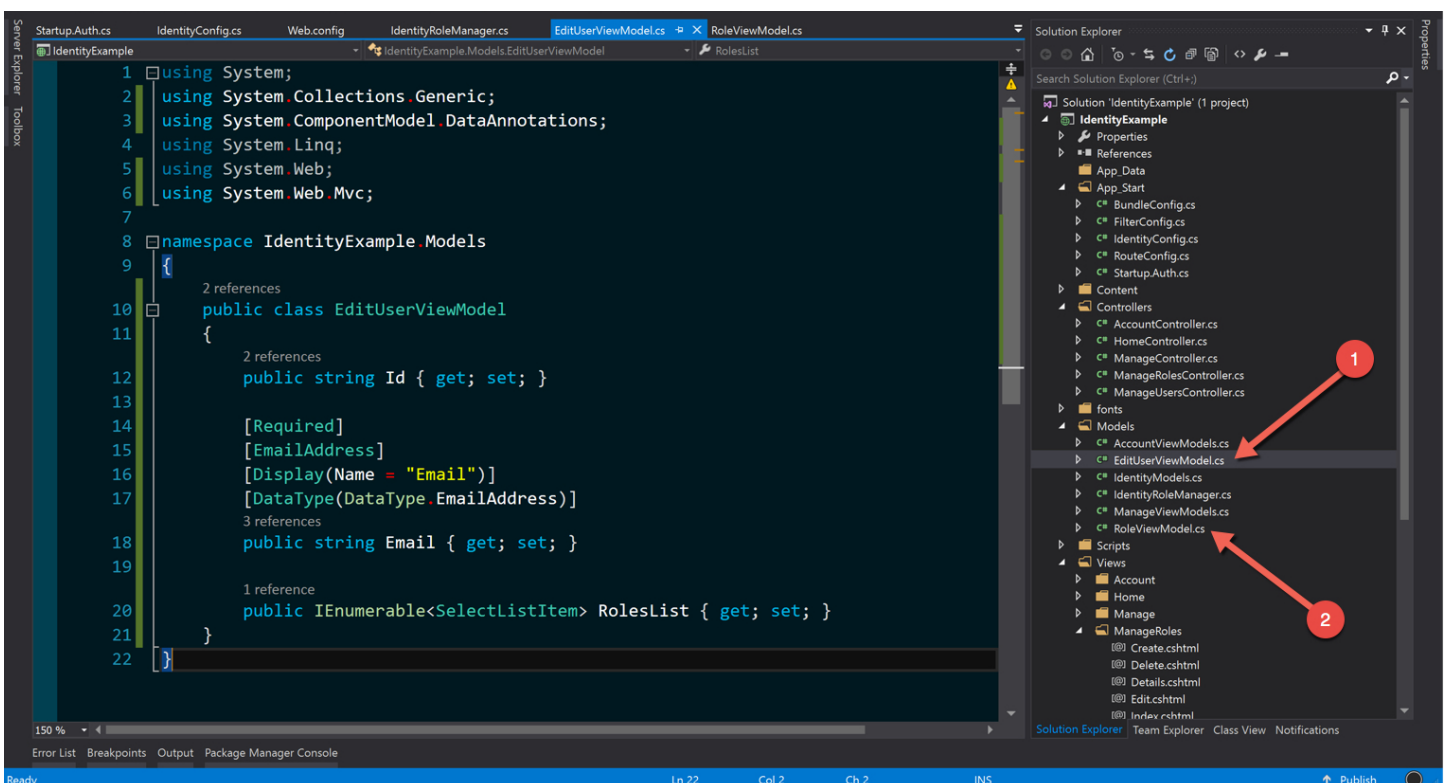

```
1  using System;
2  using System.Collections.Generic;
3  using System.Linq;
4  using System.Web;
5  using Microsoft.AspNet.Identity;
6  using Microsoft.AspNet.Identity.EntityFramework;
7  using Microsoft.AspNet.Identity.Owin;
8  using Microsoft.Owin;
9
10 namespace IdentityExample.Models
11 {
12     14 references
13     public class IdentityRoleManager : RoleManager<IdentityRole>
14     {
15         1 reference
16         public IdentityRoleManager(IRoleStore<IdentityRole> roleStore) : base(roleStore)
17         {
18         }
19
20         1 reference
21         public static IdentityRoleManager Create(IdentityFactoryOptions<IdentityRoleManager> options, IOwinContext context)
22         {
23             return new IdentityRoleManager(new RoleStore<IdentityRole>(context.Get<DbContext>().Database), context);
24         }
25     }
26 }

```

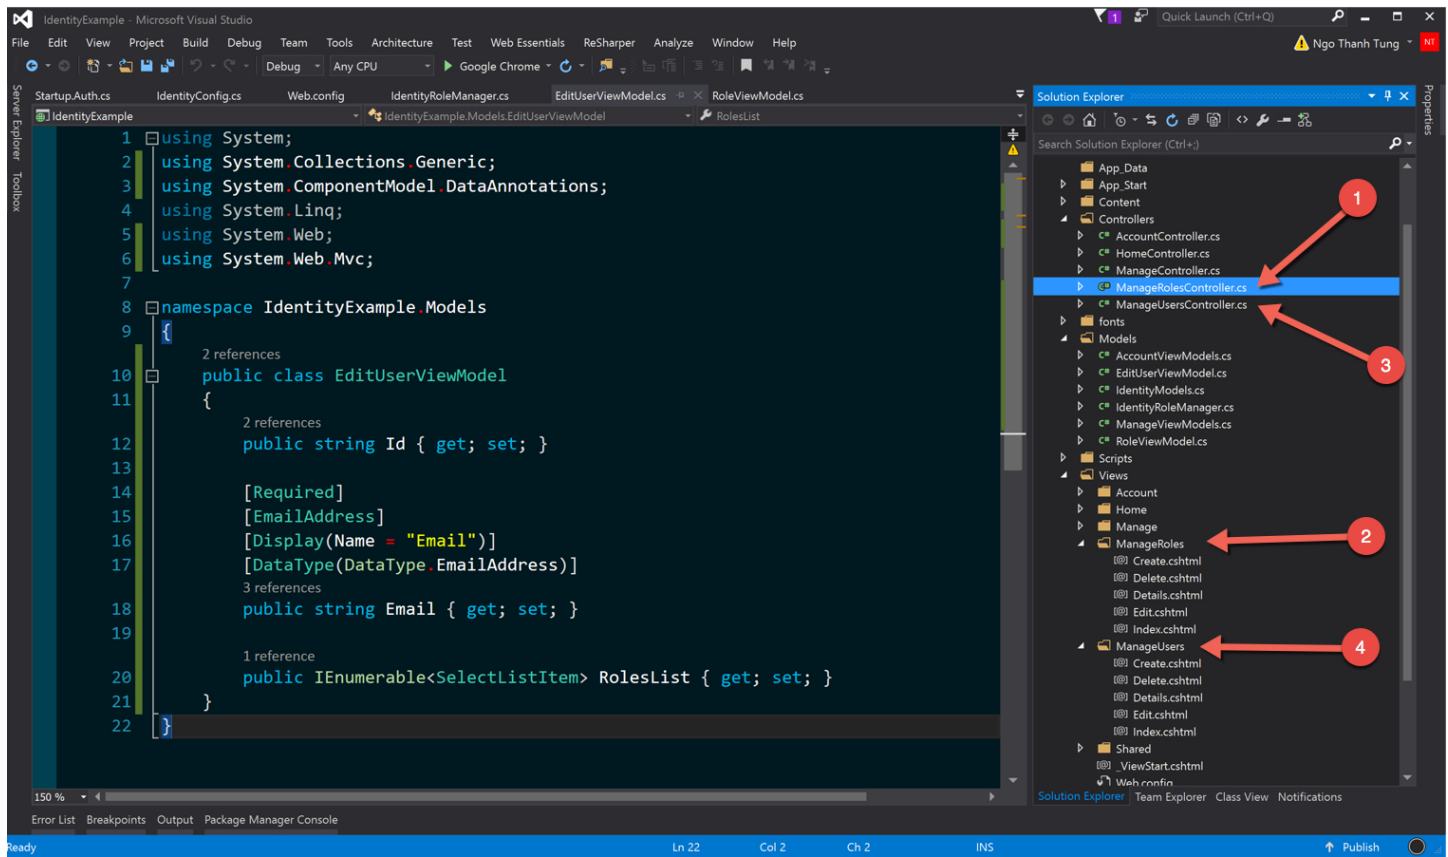

3) Đăng ký IdentityRoleManager trong StartupAuth.cs

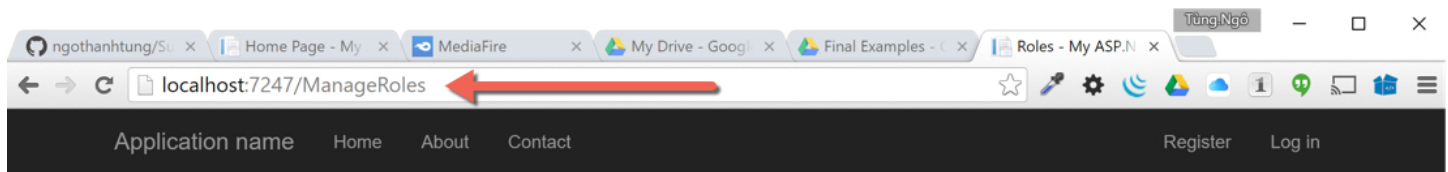

4) Tạo các class EditUserViewModel, RoleViewModel để sử dụng cho việc cập nhật

5) Tạo ManageRolesController và các Views tương ứng. Tương tự, tạo ManageUserController và các Views tương ứng

6) Chạy thử để trải nghiệm:

Index
